DETAILED ACTION

Claim Objections

1. Claim 4 is objected to because of the following informalities: it depends upon a cancelled claim. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 4, 6 and 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Blocker (U.S. Patent 3,969,745), newly cited.

Regarding claims 1, 4, and 8-10, Blocker discloses in figure 3 a semiconductor device comprising a semiconductor substrate 13; two semiconductor components 10a and 10d provided on the principal surface of the substrate, and multiple through holes, shown in the figure, which pass from the principal surface through the backside of the substrate and are provided in a region of the substrate between the two adjacent components; and a conductor film formed directly on the side faces of the through holes.

Regarding claim 6, note that Blocker discloses the limitation in the claim, as discussed above, further disclosing a second group of through holes (the two in the

middle of the substrate) with their respective conductor film are connected to the back surface of the substrate.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Blocker.

Blocker discloses the claimed invention, as discussed above, but does not explicitly disclose the gap between the adjacent through holes is smaller than the thickness of the substrate. It would have been obvious to one of ordinary skill in the art at the time of the invention to make adjustments regarding the distances between the through holes, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955).

6. Claims 5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blocker as applied to claim 1 above, and further in view of Payne (U.S. Patent 5,959,905), newly cited.

Blocker discloses the claimed invention, as discussed above, except for multiple transistors.

Payne discloses at column 1, lines 10-15 that an array of transistors are normally used for various purposes. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to make an array of transistors of the structure of Blocker so it would be usable in a desired application.

Response to Arguments

7. Applicant's arguments filed on 8/19/03 with respect to the rejected claims have been considered but are moot in view of the new grounds of rejection.
